Image Generation Prompt: Cardboard box fort, defending against zombies

Steps: Here's an HTML fragment outlining the steps to create a cardboard castle, focusing on upcycling: ``html Upcycled Cardboard Castle Creating a Cardboard Castle from Recycled Materials This project upcycles a cardboard box into a fun castle for imaginative play. Materials: **One sturdy cardboard box:** Choose a box that's large enough for your desired castle size. **Cutting tool:** A utility knife or craft knife (adult supervision required). **Ruler or measuring tape:** For accurate measurements. **Optional:** Markers, crayons, or paint for decoration. Steps: **Design & Measure:** Sketch your castle design on the cardboard box. Consider the size and placement of walls, windows, doors, and battlements. **Cut the Walls:** Carefully cut the cardboard according to your design, creating the castle's walls and roof. Be mindful of the box's pre-existing folds and flaps. **Create Battlements:** Cut out rectangular sections along the top edge of the walls to form the battlements. You might need to fold and score the cardboard to make them stand up. **Cut the Door & Windows:** Cut out arched or rectangular openings for the doors and windows. **Optional: Additional Features:** Add details like a drawbridge (from a cardboard flap) or a small tower (from a separate box piece). **Reinforce the Structure (optional):** To make your castle more durable, you can add extra layers of cardboard for reinforcement in key areas, especially around cutouts or corners. **Decorate (optional):** Once your castle structure is complete, you can decorate it using markers, crayons, paint, or other materials. Consider adding a moat around the base using a separate cardboard strip Safety Note: Adult supervision is required when using sharp cutting tools. Always cut away from yourself and use a cutting mat to protect surfaces. ``
