Image Generation Prompt: Chandelier made of plastic water bottles, modern, intricate

Steps: ```html Clean and prepare the plastic water bottles: Remove labels and thoroughly wash the bottles. Cut and shape the bottles: Carefully cut the bottoms off the bottles to create uniform shapes, ensuring consistency for a cohesive look. Assemble the layers: Arrange the prepared bottle sections in concentric circles, creating layers for the chandelier's body. Secure each layer with strong adhesive or other suitable method. Create the central structure: Construct a sturdy framework to support the weight of the assembled bottles. This could involve using wire, metal rods or another durable material. Attach the bottle layers: Securely attach the prepared bottle layers to the central structure, maintaining a balanced and aesthetically pleasing design. Install lighting: Integrate small light sources (LEDs are recommended for energy efficiency) within the bottle structures. Consider using battery-powered LEDs for ease of placement. Add decorative elements (optional): Use the paper labels to create decorative accents, such as a band around the mid-section of the chandelier. Finish and hang: Once the chandelier is assembled, attach a hanging mechanism to the top of the central structure. Ensure the fixture is securely hung and stable. ```
